Rathbones Model Portfolio Service on Platforms

Growth Strategy

30 September 2026

Investment Objective

The portfolio aims to deliver a return of CPI +4% per annum, net of fees, over a minimum investment horizon of five years. This portfolio is suitable for retail investors with a medium/highrisk tolerance who are willing and able to accept the potential loss of capital in pursuit of longterm capital growth.

Portfolio Overview

This is a discretionary, actively managed portfolio with a medium/high-risk profile, constructed using our Liquidity, Equity-type risk, and Diversifiers (LED) framework. The portfolio is invested in three Rathbones Asset Management building block funds specifically designed for the MPS service.

Key Risks

- The value of your investment can go down as well as up so you could get back less than you invest.
- The portfolio may invest in assets which are denominated in currencies other than UK pound sterling. These investments may be affected by changes in currency exchange rates, which is known as currency risk.
- There is also a risk that an investment may not be easily sold without a significant loss in value due to an insufficient number of buyers in the market. This is known as liquidity risk.
- The portfolio may invest in emerging market equities. The risk of investing in emerging markets include potential political instability, rapid changes in economic conditions and less stringent regulatory frameworks for companies and governments in emerging markets. This can lead to higher investment uncertainty and significant investment losses.
